

Damaka[®] Volga[™]

Stream your experiences in real-time from your Smartphone

**Volga Platform is an
Ideal Choice for Live
Video Streaming
Applications**

Volga is a platform that provides all the intricate pieces to the solution that would cater to the needs of live video streaming from anywhere to anywhere in real-time and in a manner that is scalable. The features of Volga are so varied and rich that it can support use cases that range from a street walker capturing an event to a corporate executive distributing invaluable information. Volga platform supports these use cases irrespective of the network and device.

**Volga is a Scalable
Platform for your
Media Lifecycle
Management
Functions**

Volga platform provides 'Media Lifecycle Management[™]' (MLM) functions of capturing, managing, publishing and viewing of digital media. System integrators and service providers can benefit from this rich feature solution in setting up innovative service oriented products to their enterprise as well as consumer clients.

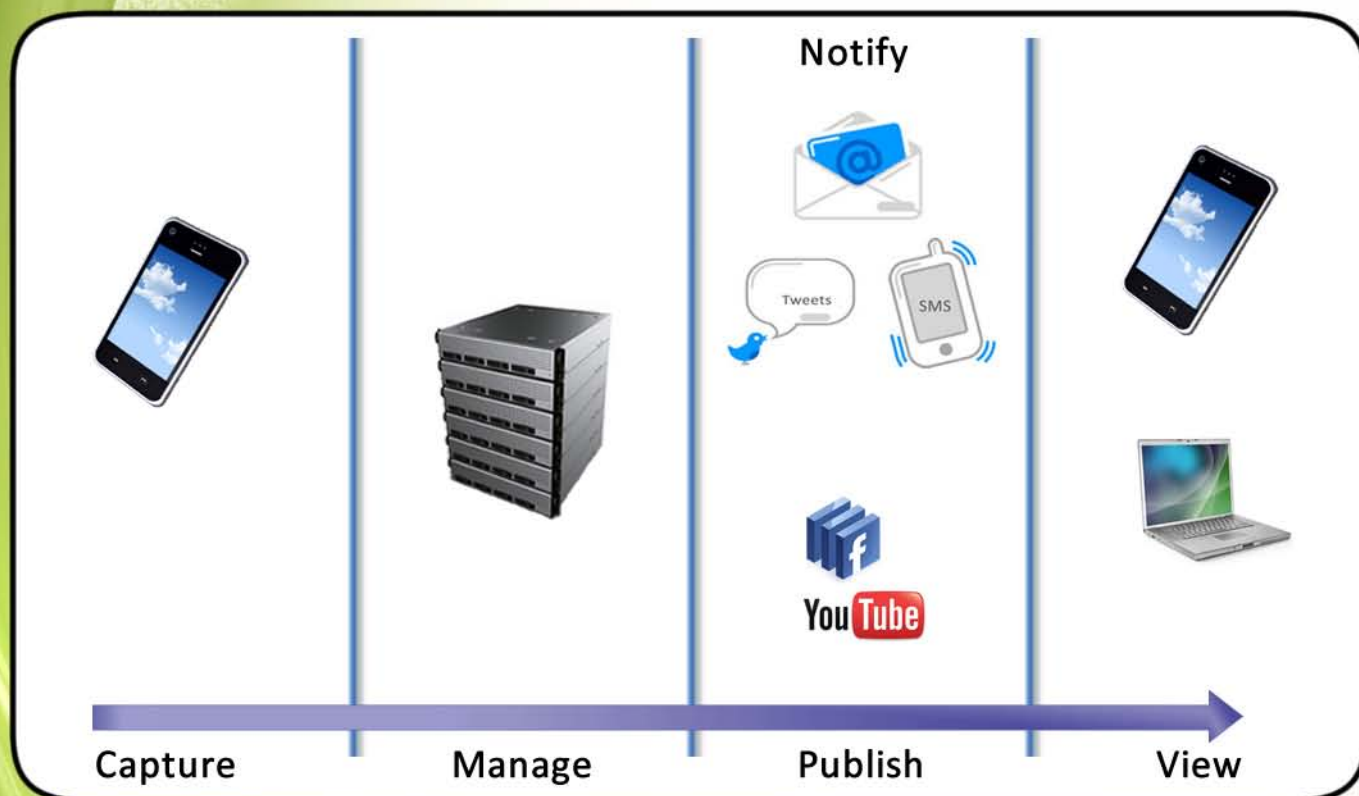

Volga system consists of a media server that can perform live streaming of media content, audio and video. The edge devices can communicate with and stream to the server from a WiFi, 3G, or 4G network. The list of Volga features available can help in building new revenue streams for service providers and social network enablers.

**Volga's Real-Time
Video Streaming can
help in your
Personal or
Business Situations**

Volga platform is very attractive to set up services for individual consumers as well as enterprise clients. If creating services to reach masses is your business, then Volga is the product that can help in enabling the service of publishing digital media from any smartphone. Volga solution can enable a service provider to offer a differentiating mobile video streaming feature to its product portfolio; as an enterprise, a company can improve its performance and efficiency through live video streaming of corporate messages. The clients can use these services where they have a need to share the media content with public or private entities.

For example, a social network subscriber can share precious personal moments using smartphones from anywhere; or an enterprise client can use Volga to publish Monday morning video messages from the CEO to the organization or a Sales Executive's push to the sales personnel in improving their performance, which can be recorded and played back for later use.
